Gonzalo Garcia Pelayo's Life

1 Pelayo's Early Days of Wheel Bias Analysis Gonzalo Garcia

Pelayo was born in Madrid on the 25th of June, 1947. He was enrolled in Spain's Official Film School in the 1960s but his film-making education came to a halt when the establishment unexpectedly closed down. It was at this point that Pelayo turned to music, accepting a job at the National Radio which laid the foundations of his successful carrier in the entertainment industry. Among his most prominent achievements are the creation of the Andalusian rock genre and his producer work with established Spanish musicians the likes of Carlos Puebla, Luis Pastor, and Maria Jimenez. In the 1970s and the 1980s, Pelayo turned to his old passion for film-making and created several feature films including Living in Seville and Manuela. Pelayo's career as a roulette player began in the early 1990s when he decided to take up the game as a hobby. At first, he played solely for entertainment purposes at Casino Gran Madrid but then it dawned on him that maybe some numbers showed more frequently than others. This is when he began recording the outcomes of the spins to determine whether there were reasonable grounds for his suspicions. Pelayo soon came to the realization it was rather laborious for a single person to collect data for multiple wheels, so he decided to recruit his son Ivan and daughter Vanessa to assist him in this task. They would spend hours upon hours each day at the Casino Gran Madrid to record the outcomes the roulette wheels produced. While his children busied themselves with data collection (they recorded over 30,000 results manually!), Pelayo, who was keen on math, took it upon himself to create computer software that would enable him to accurately analyze the recorded results. The program he created in the simple QBasic language would assign a numerical value to every numbered pocket on the roulette wheel. The higher the frequency of occurrence of a given number, the greater numerical value the software would assign to it. This enabled Pelayo to create a profile for each wheel his children clocked, helped him identify biased wheels, and compile lists of the numbers with abnormally high hit frequency. Such numbers were more likely to occur, he reasoned. This was a turning point for the entire Pelayo family.

2 The Pelayos' Success in Casino

Gran Madrid After profiling numerous wheels, Pelayo established that exploiting such biases can overturn the casino's edge and give the player the staggering advantage of 6%. The player would not win on every spin, of course, but a smart person armed with this bias information could never lose to the house over the long run. The roulette team expanded, with more members of the Pelayo family joining in. Pelayo understood that losing streaks would occur despite his advantage and that he needed a more substantial bankroll to recover from these bad runs. Despite his successful career as a film-maker and music producer, he was by no means a rich man. Pelayo decided to sell the rights of one of his documentary films which helped him build up the bankroll to around R\$2,200. Since Pelayo's simulations showed pocket bias, he and his family members decided to bet straight up on the favored numbers. Individual numbers had smaller odds of showing (1 to 36) but they yielded higher payouts of 35 to 1. The Pelayos' starting bankroll was insignificant in size, which helped the family avoid casino detection early on in their roulette career. The family suffered a poor start in the beginning, losing half of their initial R\$2,200 investment while playing at Casino Gran Madrid. Despite this disappointment, the Pelayos did not give up but continue to wager on the favored numbers. The bias soon began to pay off which encouraged the family to start visiting the casino as many as six times per week. Now that the whole family was recruited to the team, the Pelayos could afford to send a member to each of the biased tables. This tactic proved useful because it prevented the staff of Casino Gran Madrid from finding out they were associated with each other. After a couple of months of play, the family succeeded in increasing their tiny R\$2,200 bankroll to over R\$100,000. This encouraged them to bet higher and higher amounts on the biased numbers. Despite this success, the Pelayos did suffer some bad streaks losing the hefty sum of R\$80,000 on one occasion.

3 Casino Madrid Strikes Back These bad runs were more than offset by the Pelayos' massive wins that amounted to hundreds of thousands. Pelayo prohibited the team members from tipping the dealers. This, along with the mind-blowing profits they generated, drew the attention of Casino Gran Madrid. The floor personnel was ordered to monitor the Pelayos' play to figure out what was going on. They applied different tactics from pressuring the team members and instructing the croupiers to spin the ball at a higher speed to switching wheels between different tables. All these efforts proved futile. After months of repeatedly playing the same biased wheels, the members of the Pelayo team were able to recognize them by small physical imperfections like scratches, for example. The casino countered with cheating accusations and tried to bar them permanently from its floors. Things escalated to such an extent that the matters were taken to court. The Spanish Supreme Court ruled in favor of the Pelayos reasoning that exploiting biased wheels is a form of advantage play, not cheating. The family finally quit Casino Gran Madrid not because they were prohibited from playing there but because of a wheel change which eliminated the bias. By the end of this stint, biased wheels had made the Pelayos R\$1 million richer.

4 The Pelayos Take on Las Vegas Their massive success at the Casino Gran Madrid tables encouraged the Pelayos to go on a tour across European casinos, with the first stop being Amsterdam. The family's good run continued there as they amassed profits to the amount of R\$400,000 over a period of several months. This fuelled the Dutch casino's suspicions so they called Casino Gran Madrid and the Pelayos were exposed. As the family traveled to other major European cities like Vienna and Paris, casino after casino barred them because of their advantage play. They would exploit the tables in each country for three to four months until local casinos would eventually detect them and ask them to leave. As the family's reputation traveled all over the continent, one security guard in a Copenhagen casino even threatened them with his gun when they tried to enter the premises. Pelayo's

nephews decided to call it quits and the team whittled down to three members, Pelayo, his wife, and his son, Ivan. It was becoming increasingly difficult for the Pelayos to get any action on European soil, so they started to explore the possibility of attacking the roulette tables on the other side of the pond. Las Vegas seemed like the perfect option for advantage players of the Pelayos' caliber. However, an assault of Sin City came with several drawbacks. For one, the roulette tables there played under the American rules and featured wheels with a single and a double zero, which doubled the casinos' advantaged to 5.26%. Enhanced surveillance also proved to be an issue. It was much harder for advantage players to go undetected in Las Vegas casinos. The family managed to maintain their advantage over the double-zero wheels by looking for more pronounced number biases. As for detection, the team members tried to blend in as much as possible by changing their accents.
